

QGIS Application - Bug report #8889

Slow "selection" of features

2013-10-17 06:42 AM - Jonathan Moules

Status: Closed	
Priority: Normal	
Assignee:	
Category: Vectors	
Affected QGIS version: 2.0.1	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 17568
Description	
<p>I have two layers in my project:</p> <ol style="list-style-type: none">1) An oracle layer with 32 features.2) A shapefile with 53345 features. <p>If I have the shapefile enabled and displayed (all features are on-screen), then any time I use the selection tool to select a oracle feature, QGIS takes a second or so to actually select it. I suspect QGIS is re-rendering the shapefile (it's fully styled); even when the features I've selected have absolutely no overlap with the shapefile (thus QGIS shouldn't need to).</p> <p>If I disable the shapefile, or pan off screen from it, selection works fine and fast.</p>
