<b>Description</b>	
<p>Hi all,</p> <p>I might be missing something, but wouldn't it be great if legends in QGIS's composer can be resized freely (i.e. through the mouse handles) without having to resize the size of fonts of each components one-by-one? IMHO the current Legend behavior in composer is a bit limited, by means that QGIS Composer treat legend as separate object, rather than 'graphic' like another items in Composer do. Also, it would be nice to have an 'explode' ability for the legend so that users will be able to arrange the items as they will.</p>
