<b>Description</b>		
Many R scripts call external R packages that users need to pre-install to run the scripts. I would like to suggest the inclusion of the category "R dependencies" below "Algorithm description".

A few providers are being removed from QGIS3 (they will be available as plugins), so the respective categories are also being removed from the bug tracker. Where necessary the tickets will be reassigned to "processing/core" to not leave them orphaned of category.

Some providers are being removed from QGIS/Processing (will be available as plugin) and so are their categories in the bug tracker. To not leave them orphaned of a category they are being reassigned to processing/core.
