

QGIS Application - Bug report #8932

segmentation fault in GDAL when exiting, QGIS hangs

2013-10-22 02:12 PM - Etienne Tourigny

Status:	Closed	Regression?:	No
Priority:	Low	Easy fix?:	No
Assignee:		Resolution:	fixed/implemented
Category:	Build/Install	Copied to github as #:	17602
Affected QGIS version:	2.0.1		
Operating System:	Linux		
Pull Request or Patch supplied:	No		
Crashes QGIS or corrupts data:	Yes		

Description

This happens with recent gdal versions (1.9, 1.10 and trunk), both QGIS Master and 2.0 Release. OS is Linux Mint 15.

After exiting QGIS, program crashes and hangs, it must be killed manually.

Crash happens in GDAL's CPLCleanupTLSList, backtrace below (with gdal 1.10)

```
*** Error in `/home/softdev/bin/qgis': corrupted double-linked list: 0x000000001593a90 ***
```

```

Revision f2fbb2f8 - 2013-12-05 11:04 AM - Matthias Kuhn

Cleanup methods for providers (implemented for GDAL and OGR)
Fix #8932

History

#1 - 2013-10-23 02:06 AM - Giovanni Manghi

On the same Linux distribution/version there are no issues using packages from the ubutugis repo (gdal 1.10). cheers!

#2 - 2013-10-23 02:47 AM - Matthias Kuhn

- *Category deleted (Rasters)*

Etienne, does this also happen to you when you build from scratch without CMAKE_BUILD_TYPE=Debug?
(Just out of curiosity, not that I would call this a fix)

#3 - 2013-10-23 01:27 PM - Etienne Tourigny

(Just out of curiosity, not that I would call this a fix)*

This happens with and without Debug (i.e. both Release and Debug).

You are right. However, I have not changed anything in my build setup, and this problem appeared a few weeks before the 2.0 release. Will use the ubuntu builds! Cheers

#6 - 2013-10-23 01:34 PM - Even Rouault

Etienne,

Can you try running qgis under valgrind, and look at the report ? Perhaps interesting things will show up.

This GDALDestroy() auto-finalization causes quite a few subtle issues with some drivers (I had problems with ECW, hopefully fixed now). Perhaps you could try editing the main() of QGIS and add explicit call GDALDestroyDriverManager() and OGRCleanupAll() from it just before returning from it. It could perhaps fix the issue.

Even, thanks for the suggestions. I think the problem is in my gdal installation, because if I use the qgis packages from ubuntu, but run with my gdal libraries in LD_LIBRARY_PATH, the problem appears again. I will try with minimal drivers and see if that helps.

I will have a look as soon as I have the time...

#8 - 2013-10-24 09:39 AM - Etienne Tourigny

- File qgis-valgrind.txt added

I ran qgis (built from release-2_0 branch and gdal 1.10 svn) with valgrind, and surprisingly it did not crash, although running without valgrind crashes every time.

Attached is the output from valgrind (no specific tools used).

Also, building QGIS using gdal-dev package from ubuntu is fine, so the problem is definitely with my gdal build.

#9 - 2013-10-24 02:43 PM - Giovanni Manghi

- Status changed from Feedback to Closed

- Resolution set to invalid

Etienne Tourigny wrote:

so the problem is definitely with my gdal build.

reopen if necessary.

#10 - 2013-11-12 10:57 AM - Etienne Tourigny

I have cleaned up my gdal build, and the problem still remains, although more intermittently with a different error (in CSVDeaccessInternal()) instead of

CPLCleanupTLSList())

```
(gdb) run

#11 - 2013-12-05 02:10 AM - Matthias Kuhn

Should be fixed in commit:f2fbb2f with help of the methods mentioned by EvanR/Etienne.

I could not reliably reproduce this error, but it seems to have gone. So if the problem persists, please reopen this issue.

#12 - 2013-12-05 02:10 AM - Matthias Kuhn

- Resolution changed from invalid to fixed/implemented
