**Description**

California is a big state, and there are at least 18 entries in the spatial reference system database.

It would be great to either have the most used spatial reference move to the top of the list of projections (maybe another column with a check a box to signify a favorite projection and sort by id and this checkbox?), or maybe another group (call it Favorites) that would be placed above Geographic Coordinate Systems (maybe populated by right clicking on a projection and clicking Add Favorite).
