

QGIS Application - Bug report #907

Crash of QGIS 0.9.1 opening attribut table

2008-01-16 04:40 AM - Yves Jacolin

Status: Closed	
Priority: Low	
Assignee: Marco Hugentobler	
Category: Digitising	
Affected QGIS version:	Regression?: No
Operating System: Mandriva	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10966

Description

Description :

edit a layer, copy-paste a feature from a layer to another one.

As the attribute table are different between the two layers, when you save your modification, a windows alert you that there is a problem with the type of the fields XXX (which is boolean in my test case, and I try to insert text for example).

With the 0.8.0 release, you could open the attribut table, looked for the '-1' id and change the incorrect data and save the layer. However, with the 0.9.1 release, QGIS crash when you try to open the attribut table.

History

This looks like one for Marcos attention

#2 - 2008-03-16 10:58 AM - Jürgen Fischer

Is this still the case >=commit:bd9f43f1 (SVN r8212)? Which data providers were you using?

#3 - 2008-03-25 07:07 AM - Yves Jacolin

- Resolution set to fixed

- Status changed from Open to Closed

I used [[PostGIS]] DataBase. This bug has been corrected. Thanks :)
