

QGIS Application - Feature request #9090

Move 'add layers' to file menu

2013-11-19 06:17 AM - Noone Noone

Status:	Open	Resolution: Copied to github as #: 17735
Priority:	Normal	
Assignee:		
Category:	GUI	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Currently the Layer menu includes a lot of stuff, so on medium size displays as laptops the menu gets scrollbars (see attachment). I suggest moving the 'Add x layer' menuitems to the File menu, even for other reasons:</p> <ul style="list-style-type: none"><li>- Endusers expect I/O related things in File menu</li><li>- currently Layer mixes several aspects (one layer, current layer, multiple layers, ...)</li></ul> <p>A single entry as 'Add vector layer...' or 'import' would be great. All the single filetypes can be submenu entries for quick access.</p>
