## Description

Qgis and ogr doesn't load the files DXF  of italian cadastral system, it give a error as file malformed. (error is:  data source is invalid)

Really these files are without header of normal dxf cad file, a workaround is load its in cad systems a save its without modify , this rebuild the header and permits to Qgis to work with that files.

But this non is very good for newbie and for diffusion of Qgis.

The cadastral maps are very important for the use an diffusion of gis system
    every software that open dxf not problem if header not exist ,  it will load the file with warning but load , Qgis stop all, is not good

i put a file of this type as attachment for example

## History

**#1 - 2013-11-25 05:33 PM - Even Rouault**

*- Target version deleted (Version 2.0.0)*

*- Status changed from Open to Closed*

Support for such files added as http://trac.osgeo.org/gdal/ticket/5307
