This is strange, because I have close button under Linux (screenshot attached) with OpenBox. Maybe this is related to different WM/DE?

BTW, can some one move this ticket to Processing bugtracker?

Well, I have a close button in the titlebar now :-)

see screenshot

if you now could explicitly set this buttons, can you maybe also have a look at

#8699

because this looks like a similar problem, only explicitly unsetting this button

I think this one can be closed then
