Description

After retrieving the layers from a oracle db connection (in Add Oracle Table(s) dialog), it is possible to click a checkbox 'Search options' which will show you a filter (called 'search') which just works :-)

BUT if you keep the search word in the filter, but UNcheck the 'Search options' checkbox, the Search-lineEdit is hidden (but still contains the filter word), AND the filter still is working. So still hiding all other layers, while you have 'Search options' unchecked.

I think two possible options:
- when unchecking the value of the Search line-edit is set to an empty string
or
- when unchecking the value stays there (could be handy...), but the filtering itself is (temporarily) disabled.
