Crashes QGIS or corrupts data:		**Copied to github as #:**	10981

Description

the windows version qgis_setup0.9.1.18_12_2007.exe doesn't import attribute tables at least for any shape files. The error occurs for dbf and sqlite.

It happens using the GRASS Toolbox and the MINGW shell and there is no error message during import but when I try to load the file in QGIS the message ("Cannot select attributes from table...") occurs.

Looking in the current GRASS location/Mapset the dbf folder is empty.

This error was also confirmed by Matthew Perry

Regards,
 Otto

History

The problem is only for dbf driver.
All work wll if you use sqlite or pg driver.

Regrads,

Leonardo

- Resolution set to fixed

- Status changed from Open to Closed

The bug is fixed on 0.9.2 developer version
http://whatnick.dyndns.org:8080/tisham/qgis_setup0.9.2rc1_16_02_2008.exe

Good work Tisham
