

QGIS Application - Bug report #9221

Overwriting shapefile removes all attribute data and features

2013-12-17 07:10 AM - Gillian Thornhill

Status: Closed	
Priority: Severe/Regression	
Assignee:	
Category: Vectors	
Affected QGIS version: 2.0.1	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 17842
Description	
<p>Using the 'save as' dialog to overwrite a shape file writes a new empty shape file, losing all the previous data in the shape file.</p> <p>Steps to reproduce:</p> <p>Create a new vector layer from the 'Layer: new' dialog, select 'New shape file layer'</p> <p>Edit this layer, (I just set it editable, added some random points, saved changes when prompted when I turned off edit mode)</p> <p>Select 'Save as' from the 'Layer' menu, leave options as defaults, Format 'ESRI Shapefile'; navigate to original file name, select in file browser.</p> <p>Select 'Replace' in dialog.</p> <p>Delete layer from QGIS.</p> <p>Go to 'Add layer', select the shape file you just saved</p> <p>Import it.</p> <p>All the data has disappeared, including the attribute table.</p> <p>I'm pretty sure this didn't happen in 1.8.</p> <p>Also, if you skip the 'Save as' step, and delete the layer then re-import it, the data is fine.</p> <p>It's the step of using 'Save as' and overwriting it that delete all the data.</p> <p>Running on MacOS 10.7.5</p> <p>Version info:</p> <p>QGIS version 2.0.1-Dufour QGIS code revision f738351</p> <p>Compiled against Qt 4.8.5 Running against Qt 4.8.5</p> <p>Compiled against GDAL/OGR 1.10.1 Running against GDAL/OGR 1.10.1</p> <p>Compiled against GEOS 3.4.2-CAPI-1.8.2 Running against GEOS 3.4.2-CAPI-1.8.2 r3921</p> <p>PostgreSQL Client Version 9.2.4 SpatiaLite Version 4.1.1</p> <p>QWT Version 6.0.2 PROJ.4 Version 480</p> <p>QScintilla2 Version</p>
