

QGIS Application - Bug report #9280

"Add postgis layer" creates a connection that is not removed until qgis is terminated

2014-01-01 01:19 PM - Matt Veenstra

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	2.0.1	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	Yes	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 17892
Description		
<p>This is observed by monitoring the pgadmin III server status window while adding and removing postgis layers.</p> <p>When adding a postgis layer, upon clicking "connect" in the dialogue box, 1 connection is created; then, clicking "add" layer to map creates an additional connection. The second connection is removed when the layer is removed from the map; however, the first connection is never removed and remains until qgis is exited.</p> <p>Qgis 2.0.1 PostgreSQL 9.2.4 Postgis 2.0.3</p>
