

QGIS Application - Bug report #9289

WMS cache never used

2014-01-04 04:52 AM - jaanvajakas -

Status: Closed	
Priority: Normal	
Assignee:	
Category: Web Services clients/WMS	
Affected QGIS version: 2.0.1	Regression?: No
Operating System: openSUSE	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 17900
Description	
<p>QGIS writes data to the .qgis2/cache/data7/ folder, but seems to never use it: panning the map a little back and forth with the hand tool always results in having to wait for the data to be downloaded from the server. This occurs with all WMS URLs I have used, e. g. "http://129.206.228.72/cached/osm?". I used a new project, the default settings when adding the WMS service and I even deleted my .qgis2 directory, so I don't have any special custom settings.</p> <p>I am using openSUSE 13.1 and qgis-master 140102-1.1-x86_64 from the repository http://download.opensuse.org/repositories/Application:/Geo/openSUSE_13.1/.</p>

- Resolution set to worksforme
- Status changed from Open to Closed

Unless you bookmark your current canvas and use a fixed window size it's not very likely to hit the exact same window again - hence caching is not used for WMS. It's current only use is WMTS/WMS-C. You can however specify a tile size for WMS to get it cached - but that will also only produce cache hits, if you use the same scales.
