Easy fix?: Description

It would be really useful for label's multiple lines formatting to be able to set a minimum number of characters for wrap to occur.

When dealing with OpenStreetMap data, I often use the space character(' ') as the wrap character. It's an easy way to deal with long labels without having to go through over hundreds of polygon names and add a special wrap character. That said, it obviously is less elegant with small words (i.e. The, of, etc.). It could be remedied by setting a minimum number of characters on a given line to execute a wrap.

E.g. 'Institute of Technology of Cambodia' (see attached image) wrapped using the space character becomes:

Institute

of

Technology

of

Cambodia

If we could set a minimum number of character before wrap (should be up to user to set it), say for the sake of this example '3', the label - relying on space to wrap - would become:

Institute

of Technology

of Cambodia

Much better:)

Thoughts? Is it do-able? That sounds to me like a nice little setting to offer to users.

Merge pull request #1208 from nirvn/expression_wordwrap3

[expression] implement a wordwrap function (fix #9412)

History

- Category set to Labelling

#2 - 2014-01-23 12:17 AM - Mathieu Pellerin - nIRV

An alternative to this (maybe more intuitive) would be to implement a wordwrap() function in the expression builder: wordwrap(string = ", nb_characters = X, break, = ", cut = false[default])

2025-12-21 1/2

A simple wordwrap(mystring,20,'\

') would trigger a wrap (insert a \

) starting at the 20th character on the next space character.

Maybe the expression function makes more sense.

#3 - 2014-01-24 02:19 AM - Giovanni Manghi

- Target version set to Future Release - Nice to have

#4 - 2014-03-04 05:12 AM - Nathan Woodrow

- Status changed from Open to Closed

Fixed in changeset commit: "9b71d081f1deb26193eca483ad9e7287bdc7af6b".
