#### Description

Hi !

Composer Legends and Composer Scales refer to a particular map.

This map is selected by the user with a drop down menu, displaying "Map 0", "Map 1", etc.

But in current version, it seem there is no way to know which one is "Map 0", which one is "Map 1", etc, which forces the user to proceed by trial and error (acceptable for 2-3 maps).

In previous versions (though it seems it was already broken in 2.0), you could get that information by hovering a map.
