QGIS Application - Bug report #9438
WMS CRS listed multiple times

2014-01-27 05:34 AM - Jonathan Moules

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Web Services clients/WMS			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	end of life	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	18032	

Description

Using WMS:

1) Connect to : http://maps.warwickshire.gov.uk/gs/ows

2) Add item 15 (z_OS_Raster_basemap)

3) QGIS might hang for while - be patient

4) Go into layer properties -> Metadata. QGIS hangs again, be patient.

5) Scroll down to "Selected Layers".

You'll see it reporting this:

    Available in CRS
    EPSG:27700
    Available in CRS
    EPSG:4326
    Available in CRS
    CRS:84
    Available in CRS
    EPSG:27700

Note that 27700 is in there twice. Further down there are some with:

    Available in CRS
    EPSG:27700
    Available in CRS
    EPSG:4326
    Available in CRS
    CRS:84
    Available in CRS
    EPSG:27700
    Available in CRS
    CRS:84

This seems to be because the CRS is listed twice in the Getcapabilities. First there's a list of CRSs that are supported by the server as a whole:

    <!--Limited list of EPSG projections:-->

```
<CRS>
EPSG:27700
</CRS>
<CRS>
EPSG:4326
</CRS>
<CRS>
CRS:84
</CRS>
```

Then later, for each layer in the GetCapabilities there's a list of CRSs that are supported by that layer, which invariably includes the same CRS again.

Strictly speaking I believe only the "layer" CRSs should be shown/used.

History

#1 - 2017-05-01 01:08 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#2 - 2019-03-09 04:04 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
