

## QGIS Application - Bug report #9490

### Line labels sometimes placed on an endpoint rather than in the middle

2014-02-04 05:19 AM - Olivier Dalang

<b>Description</b>		
Hi !		
I frequently encounter the following bug : depending on other layer's visibility, some labels (of polyline layers) are moved to an endpoint of the line rather than being display in the middle.		
<ul style="list-style-type: none"><li>- This does not happen at all scales and I couldn't manage to find out when it's happening and when not.</li><li>- I tried to play around with some render settings, but it seems there's no relevant option to avoid this.</li><li>- The bug is already present in 2.0.1.</li></ul>		
See the screenshots :		
A - display is as expected		
B - when activating another layer, one of the label moved it's position		
I can provide a test file upon request (I'd rather not post it here, but can send it privately without problem)		

#### History

##### #1 - 2014-02-07 01:47 PM - Larry Shaffer

Try un-checking "Discourage labels from covering features" for the *lots* layer, or for both layers. It is under Vector Properties -> Labels -> Rendering

##### #2 - 2016-06-09 01:13 PM - Nyal Dawson

- Resolution set to not reproducible
- Status changed from Open to Closed

Closing due to lack of feedback. If still reproducible in current versions please reopen and attach a sample project
