Pull Request or Patch supplied:		Resolution: duplicate
Easy fix?:	No	Copied to github as #: 11011
Description		
<p>Hi,</p> <p>Recently I have been working with [[PostgreSQL]] 8.3 and uuid data type. When I have a table with uuid data type as primary key, qgis can't show or manipulate it.</p>

A suggested workaround for this is to:

- 1. drop the primary key constraint
- 1. add a unique key constraint on the uuid column (former pkey)
- 1. add a serial column (this could be on the far right-side .. doesn't matter)
- 1. create a primary key on the newly created serial column

FYI, very few GIS programs allow a non-integer primary key.
