Description

Hi,

Sometimes, it is nice to give labels the same color as the objets they refer to.

When there are too many classes, this can be a bit tedious.

The "expression plus" plugin comes with the ability to get the color from a given (continuous) ramp.

It would be nice to have the same system with discrete qualitative ramps. If the ramp has 5 classes, then we could use ramp_color_rgb('[qual. ramp]',[1 to 5])

Also, why not directly setting a column with the color set in the symbology ?
