

QGIS Application - Feature request #9531

Allow QGIS Relations to use composite keys

2014-02-10 11:08 AM - cgsbob -

Status: Open	
Priority: Normal	
Assignee:	
Category: Data Provider	
Pull Request or Patch Supplied:	Resolution:
Easy fix?: No	Copied to github as #: 18120
Description	
I am working on using QGIS to enter borehole data using QGIS Relations. It is a snap to create 1:1 and 1:N relations on one foreign key, but it is impossible to work with composite keys (such as the relationship between SAMPLE_DATA and SOILS_INDICES_LAB in the relations.jpg).	

History

#1 - 2014-02-11 04:34 AM - Matthias Kuhn

- Target version set to Future Release - Nice to have

This was taken into account when designing the low-level implementation of the relations functionality. However, the GUI for it and probably some logic as well is missing (obviously).

I plan to do continue working on this in the future.

If you are interested in funding to raise the priority of this issue, please contact me via PM.

#2 - 2017-05-01 12:47 AM - Giovanni Manghi

- Easy fix? set to No

#3 - 2018-10-24 06:22 PM - cgsbob -

We are interested in funding this issue. Unfortunately we have to limit ourselves to a developer from the US because we are a California state agency.
