Pull Request or Patch supplied:	No	Resolution:	
Easy fix?:	No	Copied to github as #:	18133
Description There is an increasing number of additional features in expression engine that make sense only in particular context. These features are available either directly in QgsExpression API (e.g. \$rownum, \$scale) or through "special columns" (e.g. \$map, \$page, ...). Additionally, with special columns, their value is shared between all QgsExpression instances, which may eventually lead to problems with concurrency (especially with multi-threading). More thoughts: https://www.mail-archive.com/qgis-developer@lists.osgeo.org/msg19488.html
