QGIS Application - Bug report #9571
Qgis crash when remove group of layers create with python

2014-02-16 03:00 AM - SC SC

Status:	Closed			
Priority:	High			
Assignee:				
Category:				
Affected QGIS version:	2.0.1	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	18154	

Description

hi after that i load many layers i run this code in python console

        li = iface.legendInterface()
        index=li.addGroup("g267")
        for l in li.layers():
            li.moveLayer(l, index)

it creates group but if i try to **delete** the group , QGIS crash , this is a problem because i use this code in a plugin too and it crash the same

i use osx
atacchment qgis report crash

History

#1 - 2014-02-16 04:16 AM - Giovanni Manghi

- Priority changed from Normal to High

#2 - 2014-02-16 09:37 AM - Martin Dobias

- Resolution set to fixed/implemented

- Status changed from Open to Closed

I can replicate the problem in QGIS 2.0.1 (on linux), but not with QGIS master, so I assume this has been fixed in the meanwhile.
