| <p>I would like to see a new grid function in composer, where a grid is not a property in a map object, but an object in it self.</p> <p>It should of course be tied to a map object, but the benefits would be several.</p> <ol style="list-style-type: none"><li>1. I can have more grids than one.</li><li>2. I can create a grid in a different coordinate system (i.e. lat/long on a projected map).</li><li>3. I can style the labelling for the grid with more control.</li></ol> <p>Each grid object should be completely customizable with regards to grid lines and labels.</p> <p>I'd really like to be able to only show kilometer digits by the grid lines and ignore digits of higher and lower significance.</p> <p>Corner labels are also a feature that should be included in a grid object.</p> <p>I've found some similar feature requests here, one or two by my self... (Feature #9292)</p> |                                      |

### History

#### #1 - 2014-08-05 08:39 PM - Nyal Dawson

- Resolution set to fixed/implemented
- Status changed from Open to Closed

Implemented in master.

#### #2 - 2014-08-06 11:01 AM - Klas Karlsson

Excelent, but...

I'd still like to see it possible to display projected coordinates (like 623000 - in meters) in kilometers (like 23) as grid labels.

Using the same example, corner labels where the "6" and trailing zeros is shown in a smaller font. This is useful if you only show part of the complete coordinates as in the example above, but removing a definable number of most as well as least significant digits is a priority for me.

Thanks!!

Klas - Isn't your second request already covered by #9292?
