

## QGIS Application - Bug report #9653

### "Output layer" default for raster calculator

2014-02-25 08:13 AM - Jonathan Moules

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	GUI	
<b>Affected QGIS version:</b>	2.2.0	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> end of life
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 18221
<b>Description</b>		
<p>Reproduce:</p> <ol style="list-style-type: none"><li>1) Load Raster Calculator, enter whatever formula.</li><li>2) Type desired filename (a.tif) into "Output layer".</li><li>3) Set to GeoTiff (probably happens with all types).</li><li>4) Press OK.</li></ol> <p>What will happen is that "a.tif" will be created in the QGIS/bin directory. Except that when I open the "output layer" dialog by clicking the elipses it shows me a different directory (one where I normally save my data). Surely it should place it into this directory; it makes no sense to ever put data into /bin</p>		

#### History

##### #1 - 2014-02-27 11:07 AM - Giovanni Manghi

- Target version set to Future Release - Lower Priority
- Category set to GUI

##### #2 - 2017-05-01 01:08 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

##### #3 - 2019-03-09 03:11 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
