Affected QGIS version:	2.2.0	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	18293	

Description

I'm trying to open a file that has "bad" Oracle layers in 2.2.0. This brings up the "Handle bad layers" dialog.

The problem is, if I double click on any of the layers to try and fix them, I am presented with the "Select a file to replace" dialog. This is wrong because it should be an Oracle dialog of some sort.

I can't see how it's possible to use the "Handle bad layers" dialog to correct an Oracle provider currently.

History

#1 - 2014-06-20 08:51 AM - Jürgen Fischer

- Resolution set to fixed/implemented

- Status changed from Open to Closed

datasource in "handle bad layers" now editable.
