#### Description

When I create a new label in Composer, I'd like to be able to size it as I create it. Currently a single click creates the label box. It would be nice to be able to hold that click and create the box at the size I want at the point of creation. This would be especially useful when working on A0, A1 and A2 layouts.

Would it also be possible to have the current QGIS text highlighted so that any immediate text will over write that text?
