

QGIS Application - Bug report #983  
"Graduated Symbol" symbology: wrong numeric ranges

2008-03-09 10:05 AM - Maciej Sieczka -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Symbology	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11042
Description		
<p>There are following values in the numeric column of a vector layer: 0, 1, 2, 3.</p> <p>Go to Layer Properties &gt; Symbology &gt; Graduated Symbol to build a legend for it.</p> <p>If the number of classes is 1, QGIS creates the range as "0.999 - 3.001". Why is 0 omitted and why is max grater than 3? The range should be "0 - 3".</p> <p>For 2 classes I get: "0.999 - 2.000" and "2.000 - 3.001". Besides wrong min and max like above, I think that "2.000" should not be included in both ranges. Moreover, as the input are integer numbers, decimal numbers should not be present - they suggest different numeric precision than the input data actually have.</p>

what data source does this apply to?

#2 - 2008-03-28 03:21 PM - Maciej Sieczka -

Replying to [comment:1 jef]:

| what data source does this apply to?

I tried [[PostGIS]] and Shapefile - the bug applies to both.

Check with the attached Shapefile first, then after importing it into [[PostGIS]] (thanks for fixing SPIT!!!). You should be a ble to reproduce the bug with either data source.

Tested in SVN trunk commit:f5a0a4ca (SVN r9471) and graduations run from -0.001 to +4.001. Works for me, I'm closing this ticket, please reopen if problems persist.

#4 - 2008-12-21 11:55 AM - Maciej Sieczka -

- Resolution deleted (fixed)

This bug is only partialy fixed.

The attached Shapefile has the following values in the floating point column 'nmb': 0.0, 1.0, 2.0, 3.0.

Try to classify it with "graduated symbol", one class - the data range according to QGIS is '-0.001 - 4.001'. This exceeds the actual data range which is '0 - 4'.

#5 - 2009-06-29 08:37 AM - Giovanni Manghi

Tested now on QGIS 1.2 (rev. 10988) with the provided shapefile (one column, "nmb", with values 0,1,2,3,4).

with 1 classes and "mode" is "quantiles" qgis creates the range "0.000000 - 4.000000"

with 1 classes and "mode" is "equal interval" qgis creates the range "-0.001 - 4.001"

with 2 classes and "mode" is "quantiles" qgis creates the ranges "0.000000 - 2.000000" and "2.000000 - 4.000000"

with 2 classes and "mode" is "equal interval" qgis creates the ranges "-0.001 - 2.000" and "2.000 - 4.001"

I'm not sure the problem has been solved.

#6 - 2009-06-30 07:49 AM - Marco Hugentobler  
- Resolution set to fixed  
- Status changed from Feedback to Closed

Fixed in commit:6a9ae8f4 (SVN r10990)
