QGIS Application - Bug report #9831
QGIS crashes when attempting to 'save as...' of a vector layer in different projection

Affected QGIS version:	2.2.0	**Regression?:**	No
Operating System:	Ubuntu	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	invalid
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	18362

Description

Hi,

QGIS crashes as soon as I try and save an existing vector layer as a shapefile in projection that differs from the original.

A bit of background, I recently recompiled GDAL with MrSID support (using a third party SDK), though this caused problems as it introduced an older version of the Geos library than QGIS was compiled against. I recompiled GDAL again without MrSID support (i.e. reverting back to the way I had it before) though now I am experiencing the problem above.

That said, this is the first time I've attempted to 'save as...' since the upgrade to QGIS 2.2. so am unsure if its a QGIS issue or if I've broken GDAL.

I can replicate the problem when trying to save in a number of different projections. If I 'save as...' using the same project as the original the export works fine and QGIS doesn't crash. One last thing is that the first time it happened a pop-up appeared with a list of libraries that are being used (see attached screenshot).

Any help greatly appreciated.

Marty

History

#1 - 2014-03-21 01:12 AM - Martyn Clark

Sorry I should add:
QGIS v.2.2
GDAL 1.10
Geos 3.3.8

#2 - 2014-06-21 02:58 AM - Jürgen Fischer

- Category set to Vectors

#3 - 2014-06-21 07:40 AM - Giovanni Manghi

- Resolution set to invalid

- Status changed from Open to Closed

likely a local issue. Reopen if necessary attaching sample data. Thanks!
