QGIS Application - Bug report #986
MapComposer fails to create a pdf in Windows

2008-03-12 08:15 AM - leolami -

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:				
Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed	
Crashes QGIS or corrupts data:		**Copied to github as #:**	11046	

Description

If I try to create a pdf with the [[MapComposer]] the pdf created is corrupted and I can't open it.
Moreover when I must choose the name of the pdf to create I can't browse to a directory where save it. The pdf is saved in the QGIS directory by default.

- Resolution set to fixed

- Status changed from Open to Closed

Since Windows doesn't support pdf writing nativelt, you need an external pdf creator/virtual printer. I use the free [[CutePDF]] Writer component to create pdf documents in Windows.

With it all the prints with the [[MapComposer]] work fine for me.
