

QGIS Application - Feature request #989

Action with Capture output disabled appears to do nothing

2008-03-12 07:12 PM - Steven Mizuno

Status: Closed	
Priority: Low	
Assignee: Gary Sherman	
Category: Map Canvas	
Pull Request or Patch supplied:	Resolution: fixed
Easy fix?: No	Copied to github as #: 11049
Description	
<p>Action with Capture output disabled appears to do nothing when activated (Linux and Windows; don't know about Mac).</p> <ol style="list-style-type: none">1. set up an Action to start Firefox, for example (doesn't matter what program is used); don't enable Capture output2. Identify an object on the canvas, then click the action item in the Identify Results dialog - no window for the program appears. <p>If Capture output is enabled, then the dialog to show the results of the program appears and the program window appears as expected.</p> <p>This used to work on 0.8.1</p>	

History

#1 - 2008-03-21 06:01 PM - Steven Mizuno

I am submitting a patch to fix this problem. This is the cause: the process is started, then immediately killed by die() if the process is not captured.

The details:

1.merged the two

if (capture)

code blocks where the process is started for capturing

2. used QProcess::startDetached() to start the non-captured process

3. on failure to start the non-captured process a message box is raised to inform the user

I have tested this on Linux and Windows XP.

#2 - 2008-08-05 12:19 AM - gjm -

- Resolution set to fixed

- Status changed from Open to Closed

Applied in commit:1b378f63 (SVN r8990). Thanks.

#3 - 2009-08-22 12:57 AM - Anonymous

Milestone Version 1.0.0 deleted
