

QGIS Application - Bug report #9965

Rotated printing with layer transparency or layer blending results in cut-off layers

2014-04-01 01:57 AM - Andreas Neumann

Status: Closed	
Priority: High	
Assignee:	
Category: Map Composer/Printing	
Affected QGIS version: 2.2.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 18462
Description	
<p>When assigning a layer transparency or layer blending to a vector layer on top of a raster layer and rotating the map frame in the print composer, the resulting PDF has a cut-off at the corner(s) - the layer is not rendered completely.</p> <p>If one assigns the transparency as an alpha value on single categories the printout works fine.</p> <p>Attached is a qgs project file (referencing WFS/WMS) and you can see the resulting PDF at http://webgis.uster.ch/temp/rotated_printing_with_layer_transparency.pdf</p> <p>It seems like this is fixed in master, but not in QGIS 2.2 - I don't know which commit fixed this.</p>	

History

#1 - 2014-04-06 06:05 AM - Jürgen Fischer

- Category changed from 33 to Map Composer/Printing

#2 - 2014-05-31 07:41 PM - Nyal Dawson

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Fixed in master
