Description

I use the Merge Vector Layers Plugin in the Graphical modeler to glue together point layers produced in steps before.
These layers have all but the last field in common.
Layer 1 has the field AW250 the layer 2 has AW250_1k.
The resuling layer has both fields, and the values from the original layers are correctly shown in their columns. But the other field value is 6 where it should be NULL or at least 0.

See attached screenshot.
